

Gear Ratio Table and Output Speed Calculations

Input stage includes a 15T 32DP pinion (am-3482) that meshes with an 85T gear (am-3533) for the first stage. User choose two gear pairs for their A (default) and B Ratio. An optional 3rd stage provides an additional C ratio choice of 1:1.14 or 2:1.

Ratios can be compared using the Output Speed calculated using the following equation:

$$\frac{CIM\ Speed(rev)}{1\ (min)} * \frac{1\ (min)}{60\ (sec)} * \frac{\pi}{Diameter(in)} * \frac{1\ (ft)}{12\ (in)} * \frac{1}{Gear\ Ratio} = Output\ Speed\ (ft/s)$$
